

rabbit serum. (d) Serum starved-HeLa cells were treated with PMA or TNF α and lysed at the indicated times. IKK and NAK activities were determined by immunocomplex kinase assays using GST-I κ B α or GST-IKK β as substrates. (e) Serum starved-A172 cells were treated with 100 ng/ml PDGF in the presence or absence of Ro 31-8220 (5 μ M), and lysed at the indicated times. NAK activity was determined by immunocomplex kinase assay. (f) Increasing amounts of NAK(KM)(2.0, 3.0, and 4.0 μ g/plate) were transfected with NF- κ B-Luc and actin- β gal reporters into A172 cells and, 30 hours after transfection, cells were treated with PDGF for additional 6h. Luciferase activity was determined as described above.

a
