

Table. 2-7 欠損により酵母に亜ヒ酸高感受性を与える遺伝子がコードする
蛋白の機能

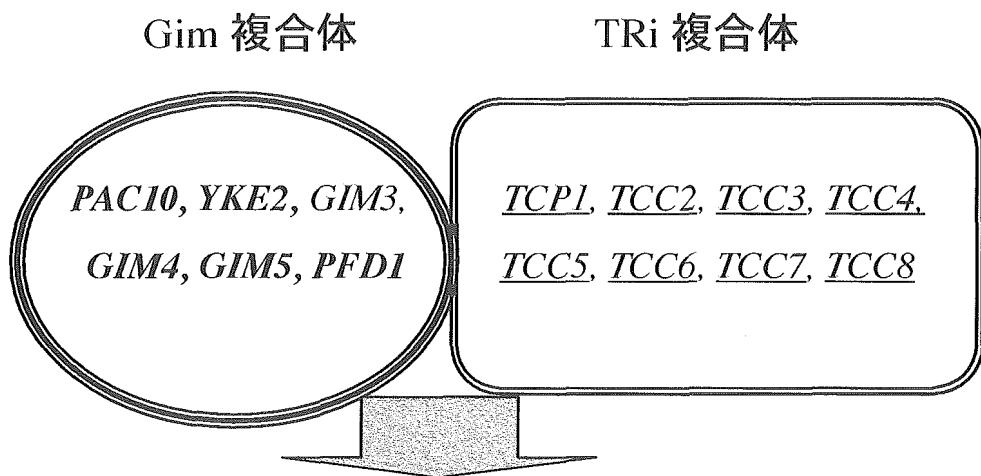

遺伝子	機能
<i>SSK1</i>	Two-component signal transducer that receives phosphate from the Sln1p-Ypd1p phosphorelay as part of the high-osmolarity signal transduction MAP kinase pathway
<i>SSK2</i>	MAP kinase kinase kinase (MAPKKK) involved in the high-osmolarity signal transduction pathway
<i>SWC5</i>	Protein involved in Prc1p and Pep4p trafficking to the vacuole and required to maintain wild-type abundance of polarized actin cables, component of SWR1 chromatin remodeling complex
<i>THR1</i>	Homoserine kinase (ATP:L-homoserine-O-P-transferase), first step in the threonine biosynthesis pathway, involved in sensitivity to UV irradiation
<i>TOM5</i>	Component of the general import complex and component of the mitochondrial translocase of the outer membrane that transfers precursor proteins from the outer membrane receptors to the general import pore
<i>UME6</i>	Global transcriptional regulator containing a zinc binuclear cluster domain involved in pathway specific repression or induction
<i>VMA22</i>	Protein involved in vacuolar H(+)-ATPase (V-ATPase) assembly or function, essential for V-ATPase activity
<i>VPS15</i>	Serine/threonine protein kinase involved in vacuolar protein sorting
<i>VPS54</i>	Subunit of the VFT (Sac2p-Vps53p-Luv1p) complex, involved in protein sorting in the late Golgi

Table. 2-8 欠損により酵母に亜ヒ酸高感受性を与える遺伝子がコードする
蛋白の機能

遺伝子	機能
<i>VPS71</i>	Component of the Swr1p-containing (SWR-C) complex, which may be involved in establishing the boundaries of heterochromatin
<i>WHI3</i>	Protein that downregulates Cln3p function and is involved in sporulation, filamentous growth, and regulation of cell size, contains one RNA recognition motif (RRM) domain
<i>YAP1</i>	Transcriptional activator of the basic leucine zipper (bZIP) family, possible redox sensor involved in oxidative stress response
<i>YBR134W</i>	Protein of unknown function
<i>YCR026C</i>	Member of the type I phosphodiesterase or nucleotide pyrophosphatase family, has a region of low similarity to a region of ectonucleotide phosphodiesterase 3 (rat LOC54410), which releases monophosphates from phosphodiester and pyrophosphate bonds
<i>YCR049C</i>	Protein of unknown function
<i>YCR087W</i>	Protein of unknown function
<i>YCR095C</i>	Member of the tyrosine phosphatase family, has low similarity to uncharacterized <i>C. albicans</i> Ipf2023p
<i>YDL119C</i>	Putative mitochondrial membrane transporter
<i>YDR010C</i>	Protein of unknown function
<i>YEL059W</i>	Protein of unknown function
<i>YER084W</i>	Protein of unknown function
<i>YJL120W</i>	Protein of unknown function

Table. 2-9 欠損により酵母に亜ヒ酸高感受性を与える遺伝子がコードする
蛋白の機能

遺伝子	機能
<i>YLR114C</i>	Protein of unknown function, has low similarity to uncharacterized <i>A. fumigatus</i> AfA5C11.11
<i>YML095C-A</i>	Protein of unknown function
<i>YMR293C</i>	Protein with similarity to amidases, may be involved in mitochondrial function
<i>YOR364W</i>	Protein of unknown function
<i>YPL183W-A</i>	Possible mitochondrial ribosomal proteins, has strong similarity to prokaryotic ribosomal proteins L36

細胞骨格を構成する蛋白質の折畳み

※ 下線のある遺伝子は、欠損により致死となる。太字は、欠損により亜ヒ酸高感受性になる遺伝子。*GIM3*, *TCP1* については検討していない。

Table. 3-1 細胞骨格に関する遺伝子がコードする蛋白の機能

遺伝子	機能
<i>YKE2</i>	Prefoldin subunit 6, component of the Gim protein complex that promotes formation of functional alpha- and gamma-tubulin, and actin
<i>ABP1</i>	Actin-binding protein of the cortical actin cytoskeleton, important for activation of the Arp2/3 complex that plays a key role actin in cytoskeleton organization
<i>VRP1</i>	nvolved in cytoskeletal organization and cellular growth; Proline-rich protein verprolin
<i>MYO3</i>	One of two type I myosins; localizes to actin cortical patches; deletion of MYO3 has little effect on growth, but myo3 myo5 double deletion causes severe defects in growth and actin cytoskeleton organization
<i>MYO5</i>	One of two type I myosins; contains proline-rich tail homology 2 (TH2) and SH3 domains; MYO5 deletion has little effect on growth, but myo3 myo5 double deletion causes severe defects in growth and actin cytoskeleton organization
<i>SLA1</i>	Protein involved in assembly of cortical actin cytoskeleton, has three SH3 domains
<i>END3</i>	Protein required for endocytosis and cytoskeletal organization
<i>ARK1</i>	Serine/threonine protein kinase associated with cortical actin cytoskeleton
<i>CAP1</i>	Actin-capping protein, alpha subunit
<i>CAP2</i>	Actin-capping protein, beta subunit
<i>SLG1</i>	Plasma membrane protein required for maintenance of cell wall integrity and for the stress response during vegetative growth

Table. 3-2 細胞骨格に関する遺伝子がコードする蛋白の機能

遺伝子	機能
<i>MKK1</i>	Serine/threonine protein kinase of the MAP kinase kinase (MEK) family involved in cell wall integrity (low-osmolarity) pathway
<i>MKK2</i>	MAP kinase kinase (MEK) serine/threonine protein kinase, involved in cell wall integrity (low-osmolarity) pathway
<i>SPA2</i>	Protein involved in cell polarity and cell fusion during mating, required for stimulation of the low affinity Ca ²⁺ influx system (LACS) that is activated during the pheromone response and is required for cell-cell fusion
<i>PEA2</i>	Protein involved in oriented growth toward mating partner, required for stimulation of the low affinity Ca ²⁺ influx system (LACS) that is activated in response to mating pheromone and is required for cell-cell fusion
