

## Outbreak Response Teams

- Alert => Rapid response
- PHO/WHO joint teams
  - Response run out of Banda Aceh
  - Investigations same day
  - Transport / access issues
  - Laboratory kit, rapid field tests
- Public Health laboratory
  - Re-equipped, re-staffed
  - Sample transport and receipt pre-arranged
  - Laboratory hotline for backup

Epidemic and Pandemic Alert and Response

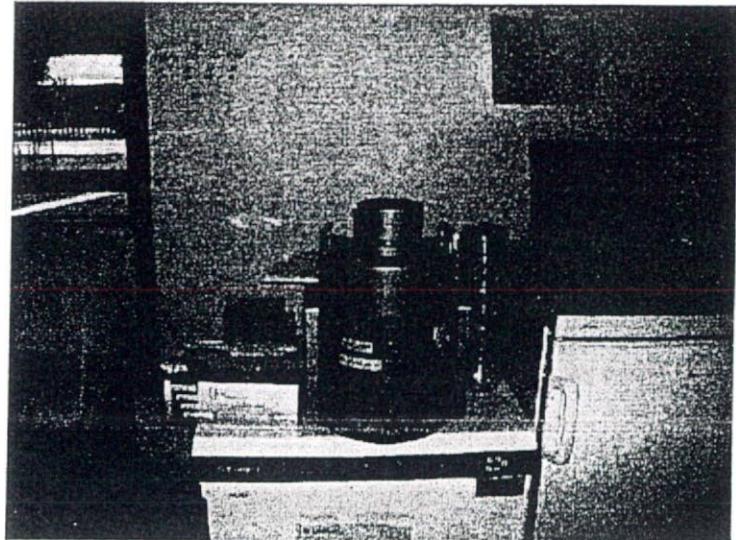

## Laboratory Capacity

- Laboratory kit
  - Sampling material
  - Personal protective equipment
  - Transport media
- Rapid tests
  - Malaria
  - Cholera
  - Shigella (flexneri)
  - Hepatitis E
  - Dengue
- Available to all medical NGOs on request

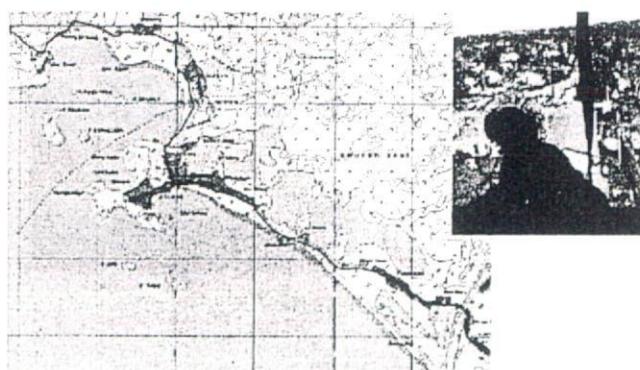

Epidemic and Pandemic Alert and Response

### **Importance of GIS for Outbreak Investigations**

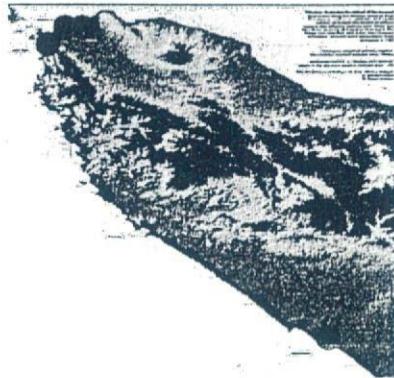

Epidemic and Pandemic Alert and Response

## Laboratory Surveillance

- Weekly + Alert system
- Pathogens of public health importance
- Hotline
- Reporting laboratories
  - Banda Aceh (3)
  - Meulaboh (1)

Epidemic and Pandemic Alert and Response

## Hospital Surveillance

- Inpatients
- Weekly + Alert system
- Banda Aceh referral hospitals
  - Pre-existing (3)
  - International aid (US, Germany, Russia, Australia, IFRC, etc.)
- Meulaboh hospitals
  - Pre-existing (1)
  - French aid hospital

Epidemic and Pandemic Alert and Response

### Data entry

- Simple and robust
- Definition of time and place units
- Data entry checks
- No calculated variables
- A form identification number

The screenshot shows a computer screen with the title "EPIDATA 2.10 [DATAFILE]" at the top. Below it is a form titled "DISEASES" with fields for "Report date", "Report time", "Report location", "Report status", and "Agency code". The "Report date" field contains "10/10/2005" and the "Report time" field contains "14:45". The "Report location" field contains "REC'D ANDERSON LIAISON". The "Report status" field contains "Preliminary". The "Agency code" field contains "WHO". The "Report date" field also has "Report by telephone" checked and "Date of reception of paper" set to "07/10/2005". The main area of the form is a grid for reporting disease cases and deaths. The columns are labeled "Cause" and "Deaths". The rows list various diseases: "Malaria", "Measles", "Pregnancy related deaths", "Respiratory disease", "Acute watery diarrhea", "Blistering diathesis", "Diarrhoea confirmed by rapid test", "Other fever disease", "Suspected measles", "Acute respiratory infection", "Acute watery diarrhea", "Measles", "Typhoid", and "Unknown". The grid cells contain numerical values representing the count of cases or deaths.

### Data Presentation

- Executive information system
- Daily alert update
- Epidemiological bulletin

Biweekly feedback meetings

### Total Consultations by Week

Weeks 2005 1-4

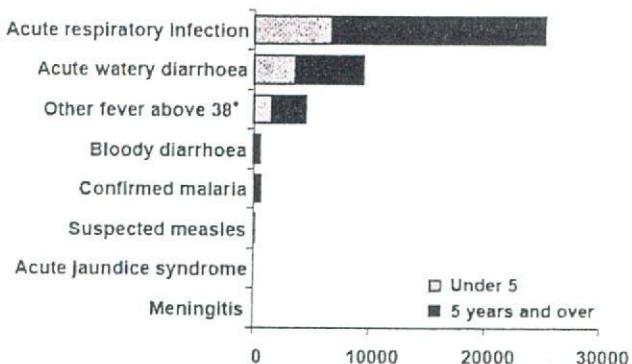

Epidemic and Pandemic Alert and Response

### Distribution of Consultations by Diagnosis

Weeks 2004-52 – 2005-12

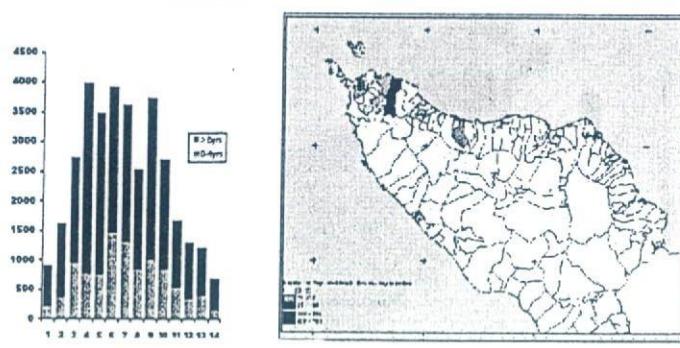

Epidemic and Pandemic Alert and Response

## Acute Respiratory Infections

Weeks 2004-52 to 2005-14

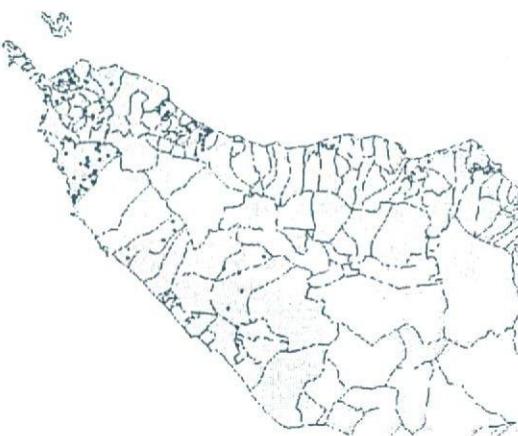

Epidemic and Pandemic Alert and Response

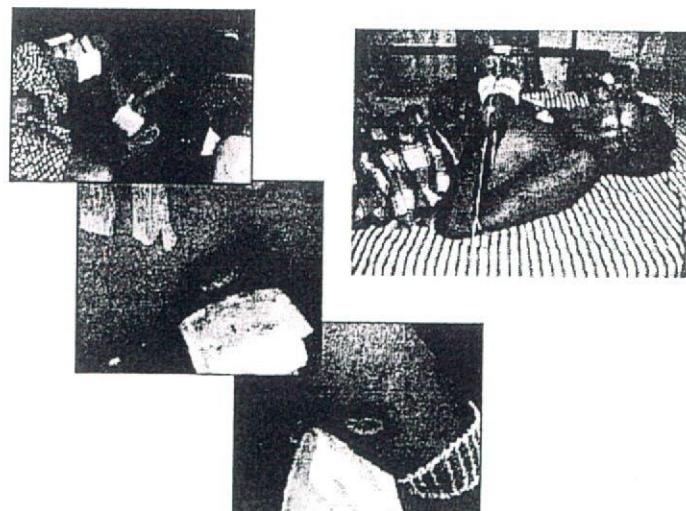

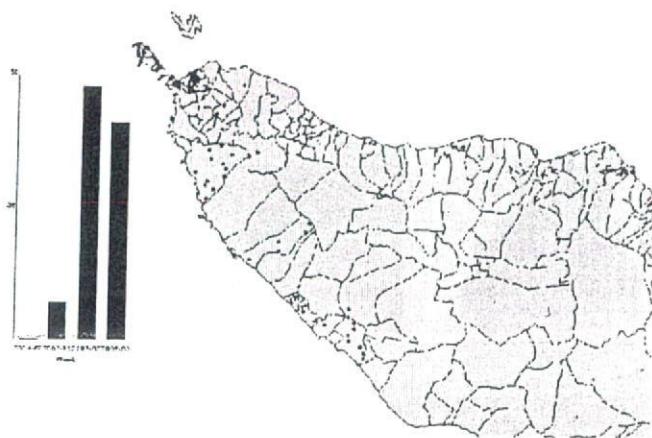

## Bloody Diarrhoea

Weeks 2004-52 to 2005-03

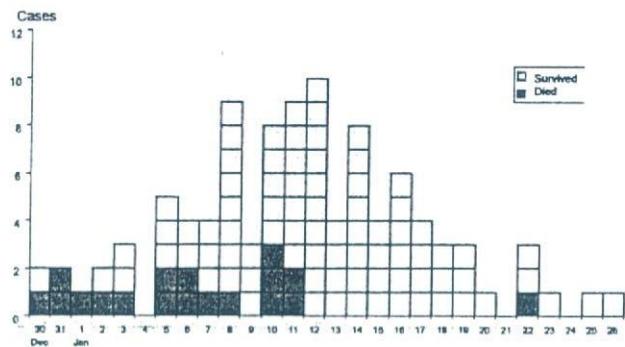

### **Confirmed Malaria**

Weeks 2004-52 to 2005-03

## Tetanus Cases (n=106) by Date of Admission

26 December 2004 - 26 January 2005

Epidemic and Pandemic Alert and Response

### Prevention and Control of Tetanus

- Protection of relief workers
- Disinfection of wounds
- Immunoglobulin supply
- Case management (ventilators)

## **Summary Surveillance**

---

- As of end of March 2005**
  - 185 000 consultations reported
  - Investigated alerts: bloody diarrhoea (11), acute watery diarrhoea (1), dengue (5), typhoid (3), jaundice (11), malaria (4), encephalitis (1), scrub typhus (1), measles (24)
  - Clustered cases: tetanus, dengue, bloody diarrhoea, typhoid, scrub typhus, hepatitis A & E
  - Outbreak: measles

**Epidemic and Pandemic Alert and Response**

## **Epidemic Preparedness**

---

- Stockpiling**
  - Drugs
  - Personal protective equipment (PPE)
- Sampling kits for investigation of alerts**
- Standard treatment protocols**
- Cholera Treatment Centre (CTC) site and potential partners for response identified**
- Public health laboratory capacity**

**Epidemic and Pandemic Alert and Response**

## Epidemic Preparedness: Stockpiling

|             | Max. AR     | Max. # cases | Drug                                | Total quantities needed | Stocks available as of 27/1   |
|-------------|-------------|--------------|-------------------------------------|-------------------------|---|
| Malaria     | 30% PR      | 300,000      | ACT                                 | 300,000 doses           | Mendo: 150,000 on site, 100,000 on order, MSF: enough for their facilities; MDM: small amounts* |
| Cholera     | 2%          | 20,000       | ORS                                 | 200,000 sachets         | 1 million   |
|             | 20% severe  | 4,000        | Ringer lactate                      | 24,000 litres           | 6000 litres   |
|             |             |              | Doxycycline                         | 12,000 tablets          | 50,000  |

| Measles     | 4%          | 40,000       | Amoxicillin                         | 800,000 capsules        | 400,000   |
|             |             |              | Vitamin A                           | 120,000 capsules        | 135,000   |
| Meningitis  | 500/100,000 | 5000         | only chloramphenicol<br>ceftriaxone | 10,000 ampoules         | 10,000 ceftriaxones   |
|             |             |              | meningo vaccine                     | 1.5 to 6 million doses  |   |

\*: 300,000 tablets ordered by WHO Jakarta

## Epidemic and Pandemic Alert and Response

## Standard Treatment Protocols

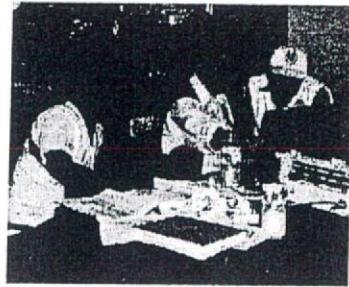

- Malaria (Artesunate + Amodiaquine)
- Dengue (MOH, based on SEARO document)
- ARI, measles (MOH / WHO IMCI, 2nd line treatment: amoxicillin)
- Acute watery diarrhea (MOH / WHO IMCI)
- Cholera (WHO guideline)
- Shigella (WHO guideline being reviewed - ciprofloxacin)
- Tetanus (MOH directive)

## Epidemic and Pandemic Alert and Response

## **Consolidation Phase**

- Joint PHO/MOH/WHO surveillance office
- Integration of alert system into routine surveillance system
  - Reporting mechanism
  - Data management
  - Investigation
  - Case definitions
  - Standard treatment guidelines
- Training of local epidemiologists in districts
- Material support to PH authorities (computers, printers, mopeds, etc)

**Epidemic and Pandemic Alert and Response**

## **Lessons learned (1)**

- Link with all actors in field
  - Importance of credibility and trust
  - Determining early who does what, and where
  - Taking every opportunity to communicate
- Be flexible
  - No situation will resemble another
  - Impossible to standardise a priori, but be prepared
  - Tool box for surveillance and response
- Missing denominators
- Tetanus surveillance in such context

**Epidemic and Pandemic Alert and Response**

## **Lessons learned (2)**

---

- Natural disasters = no scaling up**
  - Logistics support +++ from day 1
  - Strong coordination presence from day 1
  - Strong technical presence from day 1
  - Scale down as necessary

**スリランカ津波災害緊急医療支援  
の中での疫学調査活動**  
**Epidemiological survey during the medical relief  
activity towards the Tsunami disaster in**

SriLanka

(特活)災害人道医療支援会  
 NPO Humanitarian Medical Assistance (HuMA)  
 島田靖 Yasushi Shimada (FETP-J 4<sup>th</sup>)

## HuMA Medical Relief Mission to the Tsunami in Sri Lanka

- Terms of activities Jan 13<sup>th</sup> to 26<sup>th</sup> Feb 2005

- Area of activities

- Democratic Socialist Republic of Sri Lanka  
Ampara District, Kilinochchi area

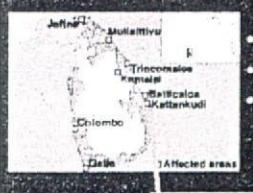

- Objectives

- To provide medical service to the affected area
- To contribute public health in the affected area

- International Staff: 6 doctors, 4 Nurses

- Local Staff: 4 Coordinator, Interpreter

### The damage in Sri Lanka

- No. of
- No. of injured: 23,059
- No. of missing: 4,115

As of 21 Feb. 2005, Source:  
WHO

District  
Area

Population: 29,000

### JDR-MT to NWMT・HuMAへ

- Handed over from JDR-MT  
(Japan Disaster Relief Team Medical Team)

- transition stage of clinical needs
- recovery of local medical facilities
- reorganization of shelters

**Our Activities**

- To provide Field Clinic
- Observational study in the affected area, shelters and local medical facilities
- Training for wound care technician in hospital
- Epidemiological survey about health status after Tsunami
- Donation of mosquito nets and ECG

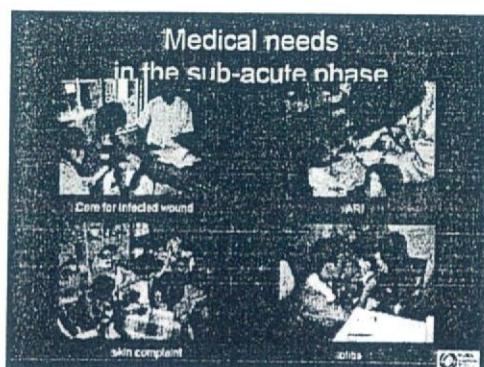

**Field Clinic**
