

Supplementary Table 1. List of primers used for real-time PCR analysis

Gene Symbol	Forward (5' -> 3')	Reverse (5' -> 3')
<i>FGFRL1</i>	acacagccctccaagatgag	gcagggttttcaggctcagt
<i>NDUFA4</i>	agcttgatcccccttttgt	ctggacgttcccttcagc
<i>GPR177</i>	aggcatctatggatgttga	ggaatatttcgaagcgctga
<i>LRP5L</i>	ctcaaagctgtgaacgttga	gcggctactgttgaagac
<i>GAPDH</i>	gagtcaacggattttgtcgt	ttagtttggaggatctcg

Gene Symbol	description	ncRNA	miR-210	Log.(ratio)
<i>IIGH3</i>	Immunoglobulin heavy chain C gene segment [Source: IMGT/GENE-DB-Acc:IGHG3]	41	1	-5.36
	NADH-cytochrome b5 reductase 1 (NHRP1) (Naphthoate-1)-cytochrome b5 reductase 3 soluble form [Source: Uniprot/SWISSPROT;Acc:P00387]	40	1	-5.32
<i>CYB5R3</i>	NADH-cytochrome b5 reductase 3 soluble form; NADH-cytochrome b5 reductase	39	1	-5.29
<i>FAM19A4</i>	[Source: Uniprot/SWISSPROT;Acc:Q961R4]	37	1	-5.21
<i>COBL</i>	Protein cordon-bleu [Source: Uniprot/SWISSPROT;Acc:Q75128]	35	1	-5.13
<i>BST2</i>	Bone marrow stromal antigen 2 precursor (BST-2) (CD317 antigen) (HMI 24 antigen).	35	1	-5.13
<i>ONCO_HUMAN</i>	Oncomodulin (OM) (Paralbumin beta). [Source: Uniprot/SWISSPROT;Acc:P32920]	35	1	-5.13
<i>POU3F1</i>	POU domain, class 3, transcription factor 1 (Octamer-binding transcription factor 6) (Otx-6) (POU domain transcription factor SCIP). [Source: Uniprot/SWISSPROT;Acc:Q90502]	35	1	-5.13
<i>PTPRT</i>	Receptor-type tyrosine-protein phosphatase T precursor (EC 3.1.3.48) (R-PTP-T) (RPTP-rho)	34	1	-5.09
<i>PROMI</i>	Protein I preserves (Prionin-like protein 1) (Antigen AC133) (CD133 antigen).	33	1	-5.04
	[Source: Uniprot/SWISSPROT;Acc:Q43490]			
<i>ARTS1_HUMAN</i>	(Aminopeptidase PILS) (Parimycin-insensitive leucyl-specific aminopeptidase) (PILS-AP) (Type 1 tumor necrosis factor receptor shedding aminopeptidase regulator).	29	1	-4.86
	[Source: Uniprot/SWISSPROT;Acc:Q9NZ08]			
<i>Q96154_HUMAN</i>	-	28	1	-4.81
<i>CALN1</i>	Calneuron 1 (Calcium-binding protein CaBP8). [Source: Uniprot/SWISSPROT;Acc:Q9BXU9]	28	1	-4.81
	UDP-glucuronosyltransferase 2B4 precursor (EC 3.1.3.48) (UDPGT) (Hydroxycitric acid)	27	1	-4.75
<i>UGT2B4</i>	[Source: Uniprot/SWISSPROT;Acc:Q92520]	26	1	-4.7
<i>GABRB1</i>	Gammaproteobacterial receptor subunit beta-1 precursor (GABA(A) receptor subunit beta-1).	26	1	-4.7
	[Source: Uniprot/SWISSPROT;Acc:P18905]			
<i>DFFB</i>	DNA fragmentation factor subunit beta (EC 3.1.3.3) (DNA fragmentation factor 40 kDa subunit) (DFF-40) (Caspase-activated deoxyribonuclease) (Caspase-activated DNase) (CAD) (Caspase-activated nuclease) (CPAN). [Source: Uniprot/SWISSPROT;Acc:Q76075]	26	1	-4.7
<i>GABRD</i>	Gamma-aminobutyric-acid receptor subunit delta precursor (GABA(A) receptor subunit delta).	26	1	-4.7
	[Source: Uniprot/SWISSPROT;Acc:Q14764]			
<i>Q5V99_HUMAN</i>	-	25	1	-4.64
<i>MANEAL</i>	Mannose-6-beta, endo_alpha like isoform 2 [Source: RefSeq; peptide;Acc:NP_687070]	25	1	-4.64
	Mannose-6-phosphate isomerase (M6P-isomerase) (M6P-isomerase) (M6P-isomerase containing protein 3) (M6P-isomerase like containing protein 3). [Source: Uniprot/SWISSPROT;Acc:Q75095]	24	1	-4.58
<i>MEGF6</i>	Metalloprotease inhibitor 4 precursor (TIMP-4) (Tissue inhibitor of metalloproteinases 4).	23	1	-4.52
	[Source: Uniprot/SWISSPROT;Acc:Q99727]			
<i>TIMP4</i>	Tumor necrosis factor-inducible protein TSG-6 precursor (TNF-stimulated gene 6 protein) (Hyaluronate-binding protein). [Source: Uniprot/SWISSPROT;Acc:Q98066]	23	1	-4.52
<i>TNFAIP6</i>	Interleukin-24 precursor (Suppressor of tumorigenicity 16 protein) (Melanoma differentiation-associated gene 7 protein) (MDA-7). [Source: Uniprot/SWISSPROT;Acc:Q13007]	23	1	-4.52
<i>Q8NH46_HUMAN</i>	Calmodulin-binding protein 1 (CaBP1) (CaBP1) (CaBP1-like protein 1) (CaBP1-like protein containing protein 3) (CaBP1-like protein containing protein 3). [Source: Uniprot/SWISSPROT;Acc:Q8NH46]	23	1	-4.52
<i>PDE1B</i>	Calcium/calmodulin-dependent 3'-5'-cyclic nucleotide phosphodiesterase type IB (EC 3.1.3.147) (Cam-PDE-1B) (65 kDa Cam-PDE). [Source: Uniprot/SWISSPROT;Acc:Q01064]	23	1	-4.52
<i>EHBPL1</i>	Signal-induced proliferation-associated protein 1 (Sipa-1) (GTPase-activating protein Sipa-1) (p130 SPA-1). [Source: Uniprot/SWISSPROT;Acc:Q961L1]	22	1	-4.46
<i>C1orf174</i>	C1orf174 protein. [Source: Uniprot/SPTREMBL;Acc:Q2MMP3]	21	1	-4.43
<i>PLEKHG1</i>	[Source: Uniprot/SWISSPROT;Acc:Q9U1L1]	20	1	-4.32
<i>ASTN1</i>	Astractin-1 precursor. [Source: Uniprot/SWISSPROT;Acc:Q14525]	20	1	-4.32
	Pregnancy-specific beta-1-glycoprotein 1 precursor (PSBG-1) (Pregnancy-specific beta-1-glycoprotein C/D) (PS-beta-C/D) (Fetal liver non-specific cross-reactive antigen 1/2) (FL-NC-1/2) (PSG9.1) (CD66c) (FL-NC-1/2). [Source: Uniprot/SWISSPROT;Acc:P11464]	20	1	-4.32
<i>SLC6A20</i>	Neurotransmitter transporter r21A homolog. [Source: Uniprot/SWISSPROT;Acc:Q9N911]	20	1	-4.32
<i>LRRK1</i>	Leucine-rich repeat neuronal protein 1 precursor (Neuronal leucine-rich repeat protein 1) (NLRR-1). [Source: Uniprot/SWISSPROT;Acc:Q6UXK5]	39	2	-4.29
<i>IFT57</i>	estrogen-related receptor beta like 1 [Source: RefSeq; peptide;Acc:NP_060480]	19	1	-4.25
	[DNA FLJ25404 fls, clone T1;02888] (Hypothetical protein FLJ25404).	19	1	-4.25
<i>Q96LL3_HUMAN</i>	[Source: Uniprot/SPTREMBL;Acc:Q96LL3]	19	1	-4.25
<i>COCH</i>	Cochlear precursor (Coch-3B2). [Source: Uniprot/SWISSPROT;Acc:Q43405]	19	1	-4.25
<i>NP_683701.2</i>	GREB1 protein isoform B [Source: RefSeq; peptide;Acc:NP_149081]	19	1	-4.25
<i>Q8NAW6_HUMAN</i>	[DNA FLJ34651 fls, clone KIDNE2018167]. [Source: Uniprot/SPTREMBL;Acc:Q8NAW6]	19	1	-4.25
<i>TAF6L</i>	TAF6-like RNA polymerase II p300/CBP-associated factor-associated factor 65 kDa subunit 6L. (PAF6L alpha). [Source: Uniprot/SWISSPROT;Acc:Q9Y6J9]	18	1	-4.17
<i>TMPRS12</i>	transmembrane protease, serine 12 [Source: RefSeq; peptide;Acc:NP_872365]	18	1	-4.17
<i>Q8NA47_HUMAN</i>	[DNA FLJ34815 fls, clone KIDNE200786]. [Source: Uniprot/SPTREMBL;Acc:Q8NA47]	17	1	-4.09
<i>SLC12A3</i>	Chloride channel member 3 (chloride channel sodium-chloride cotransporter) (Na-Cl symporter). [Source: Uniprot/SWISSPROT;Acc:P53017]	17	1	-4.09
	Cell adhesion molecule-related domain-regulated by oncogenes precursor.	17	1	-4.09
<i>CDON</i>	[Source: Uniprot/SWISSPROT;Acc:Q4KMG0]	17	1	-4.09
<i>SGCG</i>	Gamma-sarcoglycan (Gamma-SG) (35 kDa dystrophin-associated glycoprotein) (35DAG). [Source: Uniprot/SWISSPROT;Acc:Q13326]	17	1	-4.09
<i>DCDC2</i>	[Source: Uniprot/SWISSPROT;Acc:Q9UH60]	17	1	-4.09

Gene Symbol	description	ncRNA	miR-210	Log(ratio)
<i>PTF1A</i>	Pancreas transcription factor 1 subunit alpha (Pancreas-specific transcription factor 1a) (bHLH transcription factor p48) (p48 DNA-binding subunit of transcription factor PTF1) (PTF1-p48).	34	2	-4.09
<i>IGSF5</i>	IGSF5 protein (Fragment). [Source:Uniprot/SWISSPROT;Acc:Q7RTS3]	17	1	-4.09
<i>TECTA</i>	Alpha-tectorin precursor. [Source:Uniprot/SWISSPROT;Acc:Q75443]	17	1	-4.09
<i>LRTM2</i>	Leucine-rich repeat and transmembrane domain-containing protein 2 precursor. [Source:Uniprot/SWISSPROT;Acc:Q8N967]	16	1	-4
<i>MYT1L</i>	Miyata transcription factor 1 (Myo-T1L protein) (MyT1-L).	16	1	-4
<i>Q9HSU6_HUMAN</i>	CDNA: FLJ23429 fts, clone HRC10578. [Source:Uniprot/SPTREMBL;Acc:C9H15H6]	16	1	-4
<i>LIX1</i>	Protein limb expression 1 homolog. [Source:Uniprot/SWISSPROT;Acc:Q8N485]	32	2	-4
<i>FSTL5</i>	Follistatin-related protein 5 precursor (Follistatin-like 5). [Source:Uniprot/SWISSPROT;Acc:Q8N475]	16	1	-4
<i>SEM2G</i>	Semennogelin 2 precursor (Semennogelin II) (SGII). [Source:Uniprot/SWISSPROT;Acc:Q02383]	15	1	-3.91
<i>Q16653_6</i>	[Source:RefSeq; peptide;Acc:NP_996536]	15	1	-3.91
<i>Q4VX05_HUMAN</i>	XAGE-1 protein (Fragment). [Source:Uniprot/SPTREMBL;Acc:Q8WVM0]	15	1	-3.91
<i>SERPINA2</i>	Alpha-1-antitrypsin-related protein precursor. [Source:Uniprot/SWISSPROT;Acc:P20848]	15	1	-3.91
<i>GSDMD1</i>	Gasdermin domain-containing protein 1. [Source:Uniprot/SWISSPROT;Acc:P57764]	15	1	-3.91
<i>QTBU25_HUMAN</i>	Zinc finger protein 83 (Zinc finger protein HFPE). [Source:Uniprot/SWISSPROT;Acc:P51522]	14	1	-3.81
<i>ZNF83</i>	Lithosphathine 1 alpha precursor (Pancreatic stone protein) (PS19) (Pancreatic thread protein) (PTP) (Islet of Langerhans regenerating protein) (REG) (Regenerating protein 1 alpha) (Islet cells regeneration factor) (ICRF). [Source:Uniprot/SWISSPROT;Acc:P05451]	14	1	-3.81
<i>GRIP1</i>	[Source:Uniprot/SWISSPROT;Acc:Q9Y3R0]	28	2	-3.81
<i>FGFR1L</i>	Fibroblast growth factor receptor like 1 precursor (FGF receptor-like protein 1) (Fibroblast growth factor receptor 5) (FGFR-like protein) (FGF homologous factor receptor).	277	21	-3.72
<i>SHBG</i>	Sex hormone-binding globulin precursor (SHBG) (Sex steroid-binding protein) (SBP) (Testis-specific androgen-binding protein) (ABP) (Testosterone estrogen-binding globulin) (Testosterone-estradiol-binding globulin) (TeBG). [Source:Uniprot/SWISSPROT;Acc:P4278]	13	1	-3.7
<i>PPIL1</i>	Peptidyl-prolyl cis-trans isomerase-like 2 (EC 5.2.2.18) (PPIase) (Rotamase) (Cyclophilin-60) (Cyclophilin-like protein Cyp-60). [Source:Uniprot/SWISSPROT;Acc:Q13356]	13	1	-3.7
<i>IGSF21</i>	Immunoglobulin superfamily member 21 precursor. [Source:Uniprot/SWISSPROT;Acc:Q96ID5]	26	2	-3.7
<i>IL21</i>	Interleukin-21 precursor (IL-21). [Source:Uniprot/SWISSPROT;Acc:Q9HB4]	13	1	-3.7
<i>CLIC6</i>	Chloride intracellular channel 6. [Source:Uniprot/SWISSPROT;Acc:Q96Y71]	13	1	-3.7
<i>SLC7R2</i>	SLC7 and NTRK-like protein 2 precursor. [Source:Uniprot/SWISSPROT;Acc:Q9H156]	12	1	-3.58
<i>RIMS1</i>	Regulating synaptic membrane excitocytosis protein 1 (Rab3-interacting molecule 1) (RIM 1). [Source:Uniprot/SWISSPROT;Acc:Q861R5]	12	1	-3.58
<i>LAYN</i>	Layil precursor. [Source:Uniprot/SWISSPROT;Acc:Q61UX1]	12	1	-3.58
<i>ASB17</i>	Ankyrin repeat and SOCS homology protein 17 (ASB-17). [Source:Uniprot/SWISSPROT;Acc:Q8WXJ9]	12	1	-3.58
<i>RAD21L1</i>	Syntaphilin. [Source:Uniprot/SWISSPROT;Acc:O15079]	12	1	-3.58
<i>FGF23</i>	Fibroblast growth factor 23 precursor (FGF-23) (Tumor-derived hypophosphatemia-inducing factor). [Source:Uniprot/SWISSPROT;Acc:Q9GZV9]	12	1	-3.58
<i>CAMTA1</i>	Calmodulin-binding transcription factor 1. [Source:Uniprot/SWISSPROT;Acc:Q9Y6Y1]	23	2	-3.52
<i>APGPBP1</i>	Apoptoprotein 11 precursor (Apo-A1D1apo-11-D) (Contains: Apolipoprotein A-II(1-76)). [Source:Uniprot/SWISSPROT;Acc:P02652]	11	1	-3.46
<i>NP_861450.1</i>	LOC283537 protein (OTTHUM#000000018184). [Source:Uniprot/SPTREMBL;Acc:Q6WPB3]	11	1	-3.46
<i>NDUF5</i>	NADH dehydrogenase (ubiquinone) 1 alpha subcomplex subunit 5 (EC 1.6.5.3) (EC 1.6.99.3) (NADH:ubiquinone oxidoreductase 13 kDa-B subunit) (Complex 1-13kD-B) (C1-13kD-B) (Complex I subunit B13). [Source:Uniprot/SWISSPROT;Acc:O16718]	11	1	-3.46
<i>DDO</i>	D-aspartate oxidase (EC 4.3.3.1) (DAO) (DAOO) (DDO). [Source:Uniprot/SWISSPROT;Acc:Q9P9B3]	22	2	-3.46
<i>BCORL2</i>	BCOR-like protein 2 (BCL6 corepressor-like protein 2). [Source:Uniprot/SWISSPROT;Acc:QRNN8881]	11	1	-3.46
<i>NM_207504</i>	CDNA FLJ46365 fts, clone TEST14051054. [Source:Uniprot/SPTREMBL;Acc:Q6ZR68]	11	1	-3.46
<i>H1A-DPA1</i>	major histocompatibility complex, class II, DP alpha 1	22	2	-3.46
<i>CDKN1C</i>	Cyclin-dependent kinase inhibitor 1C (Cyclin-dependent kinase inhibitor p57(p21)) (p57(KIP2)). [Source:Uniprot/SWISSPROT;Acc:Q9Y6Y1]	11	1	-3.46
<i>DNAL11</i>	Asparagine-linked light intermediate poly-peptide 1 (Inner dynein arm light chain, axonemal) (hp28). [Source:Uniprot/SWISSPROT;Acc:O14645]	11	1	-3.46
<i>MCH-3R</i>	(MCH-3) (MCH2) (G-protein coupled receptor 145) (GPR17). [Source:Uniprot/SWISSPROT;Acc:Q94181]	10	1	-3.32
<i>MCHR2</i>	[Source:Uniprot/SWISSPROT;Acc:Q96WV1]	21	2	-3.39
<i>DNAH2</i>	dynein heavy chain domain 3 [Source:RefSeq; peptide;Acc:NP_065928]	21	2	-3.39
<i>Reticulon-2</i>	[Neuroendocrine-specific protein-like 1] (NSP-like protein 1) (NSPLI). [Source:Uniprot/SWISSPROT;Acc:O75298]	21	2	-3.39
<i>ASIP</i>	[Source:Uniprot/SWISSPROT;Acc:P42127]	10	1	-3.32
<i>AMPH</i>	Amphiphysin. [Source:Uniprot/SWISSPROT;Acc:P49418]	10	1	-3.32
<i>FBXL21</i>	F-box and leucine-rich repeat protein 21 [Source:RefSeq; peptide;Acc:NP_036291]	10	1	-3.32
<i>ANGPT12</i>	[Source:Uniprot/SWISSPROT;Acc:Q9UKU9]	30	3	-3.32
<i>Q96RZ4_HUMAN</i>	-	30	3	-3.32
<i>C12orf50</i>	C12orf50 protein (Fragment). [Source:Uniprot/SPTREMBL;Acc:Q6P674]	20	2	-3.32

Supplementary Table 2. The list represents 222 genes decreased by more than five-fold in miR-210-transfected cells compared with ncRNA-transfected cells.

Gene Symbol	Description	ncRNA	mir-210	Log2FC
<i>Beta</i> -microtaminogen precursor (Prostacyclin secreted plasma protein) (Prostacyclin synthase protein) (PSPI-94) (Seminal plasma beta-inhibin) (Immunoglobulin-binding factor) (IGBF) (PN44). [Source:Uniprot;SWISSPROT;Acc:P008118]		20	2	-3.32
<i>Hkr2_juman</i>	Kruppel-related zinc finger protein 2 (Protein HKR2) (Zinc finger protein 50 (Zinc finger and SCAN domain-containing protein 22) (Fragment). [Source:Uniprot;SWISSPROT;Acc:P10073]	10	1	-3.32
<i>Hivep3</i>	[Source:RefSeq;peptide;Acc:NP_077899]	19	2	-3.23
<i>Gpr35</i>	Probable G-protein coupled receptor 35. [Source:Uniprot;SWISSPROT;Acc:Q9HIC7]	19	2	-3.23
<i>Clof145</i>	Clof145 protein (Fragment). [Source:Uniprot;SPTREMBL;Acc:Q8NZT2]	19	2	-3.23
<i>Cbx6</i>	Chromobox protein homolog 6. [Source:Uniprot;SWISSPROT;Acc:Q9N503]	28	3	-3.23
<i>Q9H135_HUMAN</i>		37	4	-3.17
<i>C1orf69</i>	Uncharacterized protein C1orf69. [Source:Uniprot;SWISSPROT;Acc:Q8TA4V]	37	4	-3.17
<i>Mye5</i>	Myogenic factor 5 (Myf-5). [Source:Uniprot;SWISSPROT;Acc:P13349]	9	1	-3.17
<i>PRKAR2B</i>	[Source:Uniprot;SWISSPROT;Acc:P31232]	9	1	-3.17
<i>Nox1</i>	NADPH oxidase homology 1 (NOX-1) (NOH-1) (NADH/NADPH mitogen-oxidase subunit P65-MOX) (Mitogen-oxidase 1) (MOX1). [Source:Uniprot;SWISSPROT;Acc:Q9Y558]	9	1	-3.17
<i>Elov3</i>	Elongation of very long chain fatty acids protein 3 (Cold-inducible glycoprotein of 30 kDa). [Source:Uniprot;SWISSPROT;Acc:Q9E023]	45	5	-3.17
<i>Bcl2l10</i>	Apoptosis regulator Bcl-2 (Bcl-2-like 10 protein) (Bcl2-L-10) (Anti-apoptotic protein NrH). [Source:Uniprot;SWISSPROT;Acc:Q9H236]	18	2	-3.17
<i>Sept8</i>	Serpin 8. [Source:Uniprot;SWISSPROT;Acc:Q9P259]	18	2	-3.17
<i>C17orf57</i>	Tissue-specific peptide. [Source:Uniprot;SPTREMBL;Acc:Q9AAG9]	18	2	-3.17
<i>Spanxxn2</i>	SPANX_N2 protein. [Source:RefSeq;peptide;Acc:NP_0009615]	9	1	-3.17
	(GlcNAc6S)3 (Inteinylated GlcNAc-6-sulfotransferase) (Intestinal N-acetylgalactosamine 6-O-sulfotransferase) (LGln6AcST) (Lgln6GST) (Galactose-N-acetylglucosamine)			
<i>Chst5</i>	[Source:Uniprot;SWISSPROT;Acc:Q9GZ59]	26	3	-3.17
<i>Dduox2a</i>	[Source:Uniprot;SWISSPROT;Acc:Q1H144]	26	3	-3.17
<i>Fam26a</i>	Protein FAM26A. [Source:Uniprot;SWISSPROT;Acc:Q86XJ0]	69	8	-3.17
<i>Neurl2</i>	Neuralized-like protein 2. [Source:Uniprot;SWISSPROT;Acc:Q9BR09]	43	5	-3.17
<i>Tert</i>	Telomerase reverse transcriptase (EC 2.7.7.49) (Telomerase catalytic subunit) (HEST1) (Telomerase-associated protein 2) (TP1). [Source:Uniprot;SWISSPROT;Acc:Q14746]	34	4	-3.09
<i>Ndufa4a</i>	NADH dehydrogenase (ubiquinone oxidoreductase, mitochondrial) alpha subcomplex subunit 4 (EC 1.6.9.3) (EC 1.6.9.93). [Source:Uniprot;SWISSPROT;Acc:Q90933]	4846	593	3.03
<i>ART1</i>	GPI-linked NDUF(A4)-arginine ADP-ribosyltransferase 1 precursor (EC 2.4.2.31) (Mono-ADP-ribosyl transferase) (CD296 antigen). [Source:Uniprot;SWISSPROT;Acc:P52961]	8	1	-2.94
<i>NP_001001684</i>	CDNA CL45831 clone, dist. NT_2R18070416. [Source:Uniprot;SPTREMBL;Acc:Q6ZS49]	8	1	-2.94
	A kinase anchor protein 3 (Protein kinase A anchoring protein 3) (PKRA3) (A kinase anchor protein 110 kDa) (AKAP 110) (Sperm oocyte-binding protein (Fibroneathesin-1) (Fibroneathesin 1) (Fibrous sheath protein 95 kDa) (FSP95)). [Source:Uniprot;SWISSPROT;Acc:Q75969]			
<i>AKAP3</i>	8	1	-2.94	
<i>Gtf21rd2</i>	GTF21 repeat domain containing 2 [Source:RefSeq;peptide;Acc:NP_775808]	8	1	-2.94
<i>Spata16</i>	spatoangiogenesis associated 16 [Source:RefSeq;peptide;Acc:NP_114161]	23	3	-2.94
	Eppin precursor (Epithelial protease inhibitor) (Serine protease inhibitor-like with Kunitz and WAP domains) (WAP-1) (WAP-domain inhibitor protein 7) (Protease inhibitor WAP7).			
<i>Spinlw1</i>	[Source:Uniprot;SWISSPROT;Acc:Q9W939]	23	3	-2.94
<i>Or2l2</i>	Olfactory receptor 2E12 (OR17.1F) (OR17.1H). [Source:Uniprot;SWISSPROT;Acc:Q9N116]	23	3	-2.94
	5-hydroxytryptamine 5A receptor (5-HT _{5A}) (Serotonin receptor 5A) (5-HT ₅ -5).			
<i>Htr5a</i>	[Source:Uniprot;SWISSPROT;Acc:P47898]	30	4	-2.85
<i>Cf015_human</i>	[Source:Uniprot;SWISSPROT;Acc:Q6UWAT]	30	4	-2.85
<i>Q9H7Y2_HUMAN</i>	CDNA FLJ14100 cDNA clone MAMMA1000855. [Source:Uniprot;SPTREMBL;Acc:Q9H7Y2]	30	4	-2.85
<i>Zfp42</i>	zinc finger protein 42 [Source:RefSeq;peptide;Acc:NP_777560]	15	2	-2.85
<i>Clof12</i>	Clof12 protein. [Source:Uniprot;SPTREMBL;Acc:Q8KQH1]	15	2	-2.85
	Tumor necrosis factor receptor superfamily member EDAR precursor (Anhidrotope ectodysplasin receptor 1) (Exostosin-1 receptor) (EDAR). [Source:Uniprot;Acc:Q9N1E0]			
<i>Edar</i>	Exostosin-1 receptor (Exostosin-1). [Source:Uniprot;Acc:Q9N1E0]	15	2	-2.85
<i>Rnf11</i>	RING finger protein 11 (Sud 1669). [Source:Uniprot;SWISSPROT;Acc:Q9Y3CS]	949	129	2.85
<i>Cldn14</i>	Claudin-14. [Source:Uniprot;SWISSPROT;Acc:Q95900]	22	3	-2.85
<i>Sgcz</i>	Zeta-sarcoglycan (Zeta-SG) (ZSG1). [Source:Uniprot;SPTREMBL;Acc:Q96D1]	29	4	-2.85
<i>Plac8</i>	Placenta-specific gene 8 protein (Plac8). [Source:Uniprot;SWISSPROT;Acc:Q9NFZ1]	121	17	-2.85
<i>Lrrc17</i>	[Source:Uniprot;SWISSPROT;Acc:Q8N6Y2]	7	1	-2.85
<i>Pcdh7</i>	[Source:Uniprot;SWISSPROT;Acc:O60245]	35	5	-2.85
<i>Trav22</i>	T-cell receptor alpha V gene segment [Source:IMGT;DB-NCBI;Acc:TRAV22]	7	1	-2.85
<i>Xab2</i>	XPA-binding protein 2 (HNP protein). [Source:Uniprot;SWISSPROT;Acc:Q9HC75]	35	5	-2.85
	(IgG Fc receptor II-a) (Fc gamma-R1a) (CD32 antigen) (CDw32). [Source:Uniprot;SWISSPROT;Acc:P2138]			
<i>Gfc2r2a</i>	[Source:Uniprot;SWISSPROT;Acc:P2138]	21	3	-2.85
<i>Sec14l5</i>		21	3	-2.85
<i>C10orf53</i>	Uncharacterized protein C10orf53. [Source:Uniprot;SWISSPROT;Acc:Q9N6V4]	21	3	-2.85
<i>Loc279516</i>		21	3	-2.85
<i>Schlfn11</i>	schlafin-like 1 [Source:RefSeq;peptide;Acc:NP_659427]	14	2	-2.85

Supplementary Table 2. The list represents 222 genes decreased by more than five-fold in miR-210-transfected cells compared with ncRNA-transfected cells.

Supplementary Table 1. The 2 lists represent decreased genes by more than five-fold in miR-210-transfected cells compared with ncRNA-transfected cells	Gene Symbol	Description	ncRNA	miR-210	Log ₂ FC	
LRTA	lectin, retinol acyltransferase (EC: 2.3.1.13) (l'phosphatidylcholine- retinol α-acyltransferase)	[Source:Uniprot;SWISSPROT;Acc:Q93271]		7	1	-2.81
GPR177	integral membrane protein GPR177 precursor (Protein willynilsson homolog (Putative NFκB-activating protein 373)) [Source:Uniprot;SWISSPROT;Acc:Q5193_3]		817	121	-2.76	
ADAMTS13	ADAMTS 13 precursor (EC 3.4.24.-) (A disintegrin and metallopeptidase with thrombospondin motif 13) (ADAM-TS13) (von Willebrand factor-cleaving protease) (vWF-cleaving protease) (vWF-CP) [Source:Uniprot;SWISSPROT;Acc:Q761X8]		47	7	-2.75	
PTCH1D1	patched domain containing 1 [Source:RefSeq;peptide;Acc:NP_00132249]		20	3	-2.74	
ACPL2	acid phosphatase like 2 [Source:RefSeq;peptide;Acc:NP_00132249]		20	3	-2.74	
TIEC	transcription factor EC isoform b [Source:RefSeq;peptide;Acc:NP_001018068]		33	5	-2.73	
STMN1	phosphoprotein p18 (pp17) (Proslin) (Metablastin) (Protein P22).	[Source:Uniprot;SWISSPROT;Acc:P16949]	1003	153	-2.71	
Q8WYR5_HUMAN	Umbra rejection antigen.	[Source:Uniprot;SPTREMBL;Acc:Q8WYR5]	557	85	-2.71	
Q8NHT0_HUMAN	MGC32805 protein	[Source:Uniprot;SPTREMBL;Acc:Q8NHT0]	26	4	-2.70	
C20orf99	UPF3B-specific binding protein 2 [Source:Uniprot;SPTREMBL;Acc:Q99H7V2]		26	4	-2.70	
PSG10	Pregnancy-specific beta-1 glycoprotein 10 precursor (PSG10-13) (PSG10-12).	[Source:Uniprot;SWISSPROT;Acc:Q52351]	13	2	-2.70	
GIAS1	Gα junctional alpha-5 protein (Connexin-40) (Cx40). [Source:Uniprot;SWISSPROT;Acc:P36382]		13	2	-2.70	
POT15_HUMAN	[Source:Uniprot;SPTREMBL;Acc:Q65581]		13	2	-2.70	
NP_001008784	C20orf22 cell surface glycoprotein isoform 2 [Source:RefSeq;peptide;Acc:NP_001008784]		13	2	-2.70	
PER3	Period circadian protein homolog 3 (Circadian clock protein PERIOD3) (PER3).	[Source:Uniprot;SPTREMBL;Acc:P56645]	45	7	-2.68	
TEDDOM1	putative membrane protein H3 [Source:RefSeq;peptide;Acc:NP_741997]		44	7	-2.65	
DOCK4	Dedicator of cytokine protein 4. [Source:Uniprot;SWISSPROT;Acc:Q8N101]		25	4	-2.64	
RIM53	Regulating synaptic membrane exocytosis protein 3 (RIM3) (Rab-3-interacting molecule 3) (RIM3) (RIM gamma). [Source:Uniprot;SWISSPROT;Acc:Q9UJ0D]		43	7	-2.62	
FICR1L	Fic receptor-like 3 precursor [Source:RefSeq;peptide;Acc:NP_44371]		49	8	-2.61	
GCKR	Glucokinase regulatory protein (Glucokinase regulator). [Source:Uniprot;SWISSPROT;Acc:Q14397]		6	1	-2.58	
NP_631922_2	Na ⁺ /H ⁺ exchanger like domain containing [Source:RefSeq;peptide;Acc:NP_631922]		24	4	-2.58	
C2orf51	CDNA FLJ23569 singl, clone TST01830 (Hypothetical protein FLJ23569) (Chromosome 2 open reading frame 51). [Source:Uniprot;SPTREMBL;Acc:Q961M6]		48	8	-2.58	
EN1	Homeobox protein engrailed-2 (Hu-En 2). [Source:Uniprot;SWISSPROT;Acc:P19622]		30	5	-2.57	
RFPL1	Ret finger protein-like 1 (RING finger protein 78). [Source:Uniprot;SWISSPROT;Acc:Q75677]		30	5	-2.58	
GDF3	Growth/differentiation factor 3 precursor (GDF-3). [Source:Uniprot;SWISSPROT;Acc:Q9NR23]		36	6	-2.58	
CDNA FLJ37357 singl, clone BRAMY2025060 (FLJ37357 protein) (Hypothetical protein FLJ37357).	[Source:Uniprot;SPTREMBL;Acc:Q8N1W6]		30	5	-2.58	
ISX	intestine-specific homeobox [Source:RefSeq;peptide;Acc:NP_00100894]		24	4	-2.58	
CX3CR1	CX3C chemokine receptor 1 (CX-3-CR1) (CX3CR1) (Fractalkine receptor) (G-protein coupled receptor 13) (V3) (Biotin chemokine receptor-like 1) (CMKRL-1) (CMKBLR-1).	[Source:Uniprot;SWISSPROT;Acc:P49238]	24	4	-2.58	
MIA2	Melanoma inhibitory activity 2 [Source:Uniprot;SWISSPROT;Acc:Q96PC5]		18	3	-2.58	
OHD4_HUMAN	Olfactory receptor 10D4. [Source:Uniprot;SWISSPROT;Acc:Q8NQ71]		18	3	-2.58	
OLFAC702	Olfactory receptor 7G2 (Olfactory receptor 19-13) (OR19-13) (OS260).	[Source:Uniprot;SWISSPROT;Acc:Q8N199]	18	3	-2.58	
ORTG2	Low density lipoprotein receptor-related protein 2 precursor (Megalin) (Glycoprotein 330) (gp330). [Source:Uniprot;SWISSPROT;Acc:P98164]		12	2	-2.58	
C2orf46	Putative uncharacterized protein C2orf46. [Source:Uniprot;SWISSPROT;Acc:Q6ZSB3]		12	2	-2.58	
Q6ZMT9_HUMAN	[Source:Uniprot;SPTREMBL;Acc:Q6ZMT9]		6	1	-2.58	
Q1QTF2	Complement C1q type necrosis factor-related protein 2 precursor.	[Source:Uniprot;SWISSPROT;Acc:Q9BXJ5]	6	1	-2.58	
SEHL2	Serine hydrolase like protein 2 (EC 3.1.-,-). [Source:Uniprot;SWISSPROT;Acc:Q9H418]		64	11	-2.54	
USHBP1	BTBD15-binding protein 1 (User syndrome type-1C protein-binding protein 1) (MCC-2) (AIE-75-binding protein 1). [Source:Uniprot;SWISSPROT;Acc:Q8N6Y0]		29	5	-2.54	
VSTM2	[Source:Uniprot;SWISSPROT;Acc:Q9HAG5]		23	4	-2.52	
AGC1	Sulfate proteoglycan core protein 1. Contains: Aggrecan core protein 2].	[Source:Uniprot;SWISSPROT;Acc:P16121]	23	4	-2.52	
BPY2C	[Source:Uniprot;SWISSPROT;Acc:Q14599]		23	4	-2.52	
DDOST	Dihydro-diphosphoglycerate-chalcide-protein glycosyltransferase 48 kDa subunit precursor (EC 2.4.1.119) (Oligosaccharyl transferase 48 kDa subunit) (DDOST 48 kDa subunit).	[Source:Uniprot;SWISSPROT;Acc:P9656]	2238	391	-2.52	
IRX1	Iroquois-class homeodomain protein IRX-1 (Iroquois homeobox protein 1) (Homeodomain protein IRX1). [Source:Uniprot;SWISSPROT;Acc:P78414]		34	6	-2.52	
CDA	1'-acetoxyl glycuronidase (CD4 precursor)-1'-CD4 specific surface antigen T4-Ley-4u.	[Source:Uniprot;SPTREMBL;Acc:P70130]	17	3	-2.52	
Q8NAH5_HUMAN	CDNA FLJ35543 singl, clone PR01201592. [Source:Uniprot;SPTREMBL;Acc:Q8NAH5]		17	3	-2.51	
PSG2	Pregnancy-specific beta-1 glycoprotein 2 precursor (PGB2-2) (Pregnancy-specific beta-1 glycoprotein 2). [Source:Uniprot;SPTREMBL;Acc:P16451]		28	5	-2.49	
THBS1	Thrombospondin 1.	[Source:Uniprot;SWISSPROT;Acc:P07996]	206	37	-2.48	
ANPBP2A2_3	Axin2, specific domain-containing protein 20A3. [Source:Uniprot;SWISSPROT;Acc:OSVUP71]		22	4	-2.48	

Supplementary Table 2. The list represents 222 genes decreased by more than five-fold in miR-210-transfected cells compared with ncRNA-transfected cells					
Gene Symbol	Description	ncRNA	miR-210	Log(ratio)	
<i>FNBP1L</i>	Ferritin-binding protein 1-like (Transducer of Cdc42-dependent actin assembly protein 1) (Toca-1). [Source: Uniprot/SWISSPROT;Acc:Q5T0NS1]	33	6	-2.46	
<i>HBB</i>	Hemoglobin subunit beta (Hemoglobin beta chain) (Beta-globin). [Source: Uniprot/SWISSPROT;Acc:P06871]	22	4	-2.46	
<i>PWHL3</i>	Pwi-like protein 3. [Source: Uniprot/SWISSPROT;Acc:Q7Z3Z3]	22	4	-2.46	
<i>MAGEA11</i>	Melanoma-associated antigen 11 (MAGE-11 antigen). [Source: Uniprot/SWISSPROT;Acc:P43364]	22	4	-2.46	
<i>KCNG1</i>	Potassium voltage-gated channel subfamily G member 1 (Voltage-gated potassium channel subunit Kv6.1) (Kv2.1). [Source: Uniprot/SWISSPROT;Acc:Q9U1X4]	11	2	-2.46	
<i>ADRA1A</i>	Alpha-1 adrenergic receptor (Alpha-1a adrenergic receptor) (Alpha-1C adrenergic receptor) (Alpha-1C adrenoreceptor) (Alpha-1a adrenergic receptor 1c). [Source: Uniprot/SWISSPROT;Acc:P35348]	11	2	-2.46	
<i>NP_001001343.J</i>	MGC27121 gene (MGC27121). mRNA [Source: RefSeq_dna;Acc:NM_001001343]	38	7	-2.44	
<i>GPNMB</i>	Transmembrane glycoprotein NMB precursor (Transmembrane glycoprotein HGFIN). [Source: Uniprot/SWISSPROT;Acc:Q14956]	54	10	-2.43	
<i>C1orf173</i>	C1orf173 protein. [Source: Uniprot/SPTREMBL;Acc:Q6GM88]	27	5	-2.43	
<i>NTS</i>	Neurotensin/neuromedin N precursor [Contains: Large neuromedin N (NMN-125); Neuromedin N (NMN) (NN); Neurotensin (NT); Taf peptide]. [Source: Uniprot/SWISSPROT;Acc:P30990]	27	5	-2.43	
<i>XKR4</i>	XK-related protein 4. [Source: Uniprot/SWISSPROT;Acc:Q5GH76]	16	3	-2.42	
<i>C12orf59</i>	C12orf59 protein. [Source: Uniprot/SPTREMBL;Acc:Q4KM59]	159	30	-2.41	
<i>USP29</i>	specific processing protease 29 (Deubiquitinating enzyme 29). [Source: Uniprot/SWISSPROT;Acc:Q9UJ71]	21	4	-2.39	
<i>PLA2G7</i>	Acylphosphatidylcholine acyltransferase A2 (LDL-PLA(2)) (2-acetyl-1-alkylglycerophosphoholine esterase) (1-alkyl-2-acetylglycerophosphocholine esterase) [Source: Uniprot/SWISSPROT;Acc:Q13093]	21	4	-2.39	
<i>NP_001006656.J</i>	MSTP119. [Source: Uniprot/SPTREMBL;Acc:Q7Z2S5]	21	4	-2.39	
<i>CEECAM1</i>	cerebral endothelial cell adhesion molecule 1 (RefSeq peptide:Acc:NP_057258)	21	4	-2.39	
<i>ZDHHC22</i>	Putative palmitoyltransferase ZDHHC22 (EC 2.3.1.1.) (Zinc finger DHHC domain-containing protein 22) (DHHC-22). [Source: Uniprot/SWISSPROT;Acc:Q8NN96]	21	4	-2.39	
<i>ZNF101</i>	Zinc finger protein 101 (Zinc finger protein HFZ12). [Source: Uniprot/SWISSPROT;Acc:Q8IZC7]	47	9	-2.38	
<i>ADRA1B</i>	Alpha-1B adrenergic receptor (Alpha-1B adrenergic receptor) (Alpha-1B adrenoreceptor). [Source: Uniprot/SWISSPROT;Acc:P33681]	26	5	-2.38	
<i>ACOX3</i>	Acyl-CoA oxidase 3, peroxisomal (EC 1.3.3.6) (1-phatanoyl-CoA oxidase) (Branched-chain 3-hydroxy-3-methylglutaryl-CoA oxidase) (BRCO). [Source: Uniprot/SWISSPROT;Acc:Q52549]	31	6	-2.37	
<i>Q8N7D0_HUMAN</i>	CDNA FLJ40424 its clone TEST12090926. [Source: Uniprot/SPTREMBL;Acc:Q8N7D0]	31	6	-2.37	
<i>PIHK1</i>	Phosphorylase kinase gamma catalytic chain. skeletal muscle isoform (EC 2.7.11.19) (Phosphorylase kinase subunit gamma 1). [Source: Uniprot/SWISSPROT;Acc:Q16816]	31	6	-2.37	
<i>LRP5L</i>	low density lipoprotein receptor-related protein 5-like [Source: RefSeq_peptide:Acc:NP_872298]	67	13	-2.37	
<i>AAK1</i>	AP2-associated protein kinase 1 (EC 2.7.11.11) (Adaptor-associated kinase 1). [Source: Uniprot/SWISSPROT;Acc:Q2M2IB]	221	43	-2.36	
<i>KIAA0195</i>	KIAA0195 (KIAA0195). mRNA [Source: RefSeq_dna;Acc:NM_014738]	40	8	-2.32	
<i>Q8NA59_HUMAN</i>	CDNA FLJ35816 fis, close TEST1206109. [Source: Uniprot/SPTREMBL;Acc:Q8NA59]	30	6	-2.32	
<i>EMID1</i>	EMI domain-containing protein 1 precursor (Protein Emu) (Emulin and multifurin domain-containing protein 1). [Source: Uniprot/SWISSPROT;Acc:Q96A84]	5	1	-2.32	
<i>C6orf122</i>	Uncharacterized protein C6orf122. [Source: Uniprot/SWISSPROT;Acc:Q516M2]	20	4	-2.32	
<i>ERC1</i>	Uncharacterized protein ERC1 (RAB6B-interacting protein 2) (ERC protein 1). [Source: Uniprot/SWISSPROT;Acc:Q86Q21]	20	4	-2.32	
<i>USP6</i>	Ubiquitin carboxyl-terminal hydrolase 6 (EC 3.1.2.15) (Ubiquitin thioesterase 6) (Ubiquitin-specific-processing protease 6) (Deubiquitinating enzyme 6) (Proto-oncogene TRE-2). [Source: Uniprot/SWISSPROT;Acc:P31252]	20	4	-2.32	
<i>GRB14</i>	Growth factor receptor-bound protein 14 (GRB14 adapter protein). [Source: Uniprot/SWISSPROT;Acc:Q14449]	15	3	-2.32	
<i>ALG10</i>	(Asparagine-linked glycosylation protein 10 homolog A). [Source: Uniprot/SWISSPROT;Acc:Q50141]	15	3	-2.32	
<i>SPTB</i>	Small nuclear ribonucleoprotein polypeptide B (SRSB protein). [Source: Uniprot/SWISSPROT;Acc:P11277]	15	3	-2.32	
<i>C3AR1</i>	[Source: Uniprot/SWISSPROT;Acc:Q16581]	10	2	-2.32	
<i>HTR2C</i>	5-hydroxytryptamine 2C receptor (5-HT2C) (Serotonin receptor 2C) (5-HT2C) (5-HT2C) (5HT-1C). [Source: Uniprot/SWISSPROT;Acc:P28335]	10	2	-2.32	
<i>Q95724_HUMAN</i>	Reverse transcriptase (Fragment). [Source: Uniprot/SPTREMBL;Acc:Q95724]	5	1	-2.32	

The fifteen genes predicted as a miR-210 target gene by microCosm, TargetScan or PicTar were highlighted in gray.

Supplementary Table 3. The list represents 811 genes predicted as a miR-210 target gene by microCosm, TargetScan and PicTar

ORIGINAL ARTICLE

MicroRNA-141 confers resistance to cisplatin-induced apoptosis by targeting YAP1 in human esophageal squamous cell carcinoma

Yukako Imanaka¹, Soken Tsuchiya², Fumiaki Sato², Yutaka Shimada³, Kazuharu Shimizu² and Gozoh Tsujimoto¹

MicroRNAs (miRNAs) are endogenous non-coding RNAs that function as negative regulators of gene expression. Alterations in miRNA expression have been shown to affect tumor growth and response to chemotherapy. In this study, we explored the possible role of miRNAs in cisplatin resistance in esophageal squamous cell carcinoma (ESCC). First we assessed the sensitivity of nine human ESCC cell lines (KYSE series) to cisplatin using an *in vitro* cell viability assay, and then we compared the miRNA profiles of the cisplatin-sensitive and -resistant cell lines by miRNA microarray analysis. The two groups showed markedly different miRNA expression profiles, and 10 miRNAs were found to be regulated differentially between the two groups. When miR-141, which was the most highly expressed miRNA in the cisplatin-resistant cell lines, was expressed ectopically in the cisplatin-sensitive cell lines, cell viability after cisplatin treatment was increased significantly. Furthermore, we found that miR-141 directly targeted the 3'-untranslated region of *YAP1*, which is known to have a crucial role in apoptosis induced by DNA-damaging agents, and thus downregulated *YAP1* expression. Our study highlights an important regulatory role for miR-141 in the development of cisplatin resistance in ESCC.

INTRODUCTION

MicroRNAs (miRNAs) are a class of small (~22 bp) endogenous non-coding RNAs that are well conserved, and function as negative regulators of gene expression. miRNAs bind to complementary sequences in the 3'-untranslated region (UTR) of target messenger RNAs and regulate their expression by cleavage and/or translational inhibition.¹ miRNAs are predicted to regulate the expression of up to one-third of human protein-coding genes,^{2–5} and they have been shown to have crucial roles in diverse biological processes, including development, differentiation, apoptosis and proliferation.^{6–8} A growing number of studies have provided strong evidence that aberrant miRNA expression is involved in the genesis and progression of cancer,⁹ and that miRNAs might function as a novel class of oncogenes or tumor-suppressor genes.^{10–13} Altered expression of miRNAs in primary human cancers has been used for tumor diagnosis, classification, staging and prognosis.¹⁴ Furthermore, the involvement of miRNAs in the response of tumor cells to chemotherapeutic agents has also been confirmed,^{15–17} which suggests that miRNAs could have a broad effect on the response of cancer cells to chemotherapy.

Esophageal cancer is the eighth most common cancer and the sixth most common cause of cancer deaths worldwide.¹⁸ In spite of comprehensive available treatment, including chemotherapy, surgery and radiotherapy, the overall 5-year survival rate for patients with esophageal squamous cell carcinoma (ESCC), the most common form of esophageal cancer, remains low, at 10–40%, because of advanced disease, metastasis and resistance of the tumor to chemotherapy and radiotherapy.^{19–21} Cisplatin is the most frequently used chemotherapeutic agent for ESCC. However, given that resistance to cisplatin limits the success of treatment, elucidation of the mechanisms that regulate cisplatin resistance in ESCC is urgently needed. In the present study, we studied the biological function of miRNAs in the development of cisplatin resistance in ESCC using the KYSE series of ESCC cell lines as a model, and focused, in particular, on the regulation of apoptosis.

MATERIALS AND METHODS

Cell lines and cultures

Human KYSE cell lines that had been established from primary tumors at our institution as described previously were cultured in RPMI 1640

Received 17 August 2010; revised 24 November 2010; accepted 26 December 2010

(Life Technologies, Gaithersburg, MD, USA) and Ham's F12 (Nissui Pharmaceutical, Tokyo, Japan) with 5% fetal bovine serum,²² HEK293 cells were cultured in Dulbecco's modified Eagle's medium (Sigma-Aldrich, St Louis, MO, USA) supplemented with 10% fetal bovine serum. Cells were cultured at 37°C with 5% CO₂.

In vitro cell viability assay

KYSE cell lines were seeded in 96-well plates and incubated for 24 h. The medium was then removed and replaced with fresh medium that contained cisplatin (Calbiochem, San Diego, CA, USA) or Dimethyl sulfoxide (DMSO) (vehicle control) and the cells were incubated for a further 48 h. Cell viability was examined using the 2-(4-iodophenyl)-3-(4-nitrophenyl)-5-(2,4-disulfonylphenyl)-2H-tetrazolium, monosodium salt (WST-1) assay.

miRNA microarray analysis

Total RNA was isolated from the KYSE cell lines with IsoGen lysis buffer (Nippon Gene, Toyama, Japan) followed by precipitation with isopropanol, and the size of the miRNA fractions was confirmed using an Agilent 2100 Bioanalyzer (Agilent Technologies, Santa Clara, CA, USA). The miRNAs were then labeled with ³H using a miRCURY LNA microRNA Power Labeling Kit (Exiqon, Woburn, MA, USA) and hybridized with a Human miRNA Oligo chip (Toray, Tokyo, Japan). Arrays were scanned using a ProScanArray laser scanning system (Perkin-Elmer, Waltham, MA, USA), and processed as analyzed with Genepix Pro 4.0 software (Axon Instruments, Sunnyvale, CA, USA). The GEO database accession code of the miRNA microarray data is GSE25464.

TaqMan RT-PCR for miRNA quantification

Expression levels of mature miRNAs were analyzed by real-time PCR using the TaqMan microRNA assay kit (Applied Biosystems, Foster City, CA, USA). Reactions were performed using an Applied Biosystems 7300 instrument with an initial denaturation at 95 °C for 10 min, followed by 40 cycles at 95 °C for 15 s and 60 °C for 1 min.

In vitro drug sensitivity assay

KYSE960 cells (1.7×10^4 per well) were seeded in 96-well plates and transfected with either pre-miR miR-141 precursor or Pre-miR miRNA Precursor-Negative Control #1 (AM17110) (Ambion, Austin, TX, USA) using the HiPerFect Transfection Reagent (Qiagen, Valencia, CA, USA) following the manufacturer's instructions. At 24 h after transfection, cells were treated with cisplatin (7.5, 15, 30, 60 or 120 µM) or DMSO for a further 48 h and then collected for analysis. Cell viability was assessed by the WST-1 assay.

Trypan blue dye exclusion assay

At 24 h after transfection, cells were treated with cisplatin (30 µM) or DMSO and collected for analysis after 0, 24, 48 and 72 h. An equal volume of 0.4% Trypan Blue Stain (Invitrogen, Carlsbad, CA, USA) was added to the cell suspensions, which were then allowed to stand for 5 min at room temperature. Stained cells (10 µl) were placed in a hemocytometer and the number of viable (unstained) cells was counted for each individual time point.

Western blotting

At 72 h after transfection, total protein was extracted from the cells using RIPA lysis buffer (50 mM Tris-HCl pH 7.5, 150 mM NaCl, 0.1% SDS, 1% Nonidet P-40, 0.5% sodium deoxycholate, protease inhibitor cocktail). Equivalent amounts of total protein extract were separated on 8% SDS-PAGE gels and transferred to polyvinylidene fluoride membranes. The blots were probed for 1 h at room temperature with antibodies against YAP1 (sc-15407, Santa Cruz, Santa Cruz, CA, USA; 1:200) or β-actin (Sigma-Aldrich; 1:1000), which was used as an internal control for protein loading. The protein bands were visualized using Western Lighting Chemiluminescence Reagent Plus (Perkin-Elmer).

Quantitative RT-PCR

In parallel, total RNA was isolated from transfected cells as described above. Total RNA (3 µg) was exposed briefly to RNase-free DNase I, and reverse

transcribed to cDNA using random primers and SuperScript II Reverse Transcriptase (Invitrogen). Subsequently, real-time PCR was performed in triplicate using the SYBR Premix Ex Taq II reagent (TAKARA BIO, Shiga, Japan) and a DyNA Engine gradient 3 System (Bio-Rad, Hercules, CA, USA). The PCR primers used for YAP1 were 5'-GTAGCCAGTTAACAGACTG-3' and 5'-CTGTCAGGAAGTCATCTGG-3'. GAPDH was used as an endogenous control for RNA normalization. The following PCR conditions were used: initial denaturation at 95 °C for 10 min, followed by 40 cycles of denaturation at 95 °C for 10 s, annealing at 58 °C for 20 s and extension at 72 °C for 20 s. PCR products were separated by electrophoresis on 2% agarose gels and visualized by ethidium bromide staining. All messenger RNA quantification data were normalized to GAPDH.

Target *in vitro* reporter assay

Constructs were generated in which the wild-type (pGL3-YAP1-3'UTRWT) and mutated (pGL3-YAP1-3'UTRMut) 3'-UTR of YAP1 were inserted downstream of a luciferase reporter. The 3'-UTR of human YAP1, which contains a putative target site of miR-141, was amplified by PCR from human genomic DNA using the primers 5'-ATGGTTGATGGAGCACATTG-3' and 5'-CTTAACATATAGCAGCATGTC-3', and inserted into the pGL3-promoter vector (Promega, Madison, WI, USA). Three point mutations in the miR-141 seed region of the YAP1 3'-UTR were generated using the QuikChange Site-Directed Mutagenesis Kit (Stratagene, La Jolla, CA, USA). The following primers were used for the mutagenesis of the miRNA-binding site 5'-CAGAACTATACCAAATCTGAGAACTAACAAATTCG-3' and 5'-GCAATTTGAGTTTCATCTCAGATTGTATGAAATTCTG-3'. Wild-type and mutant inserts were verified by DNA sequencing. HEK293 cells (2×10^6 per well) were co-transfected in 24-well plates with 1 µg of the firefly luciferase reporter vector and 100 ng of pRL-TK (a control vector that contains Renilla luciferase; Promega), as well as with 5 pmol of miR-141 or a control precursor (Ambion) or with 25 pmol of miR 141 or a control inhibitor (Dharmacon, Lafayette, CO, USA) using Lipofectamine 2000 (Invitrogen) according to the manufacturer's instructions. Luciferase activity was measured at 24 h after transfection using the Dual-Luciferase Reporter Assay System (Promega). For each well, firefly luciferase activity was normalized to Renilla luciferase activity.

Apoptosis assay

At 24 h after transfection, cells were treated with cisplatin (30 µM) or DMSO for a further 48 h and then collected for analysis. Apoptosis was assayed using a FITC Annexin V Apoptosis Detection Kit 1 (BD Biosciences, San Jose, CA, USA) according to the manufacturer's protocol and analyzed using a FACScalibur flow cytometer (BD Biosciences). Apoptotic cells were indicated by high levels of Annexin V-conjugated FITC fluorescence and low levels of propidium iodide fluorescence.

Statistical analysis

Statistical significance was assessed using an unpaired Student's *t*-test. $P < 0.05$ was considered to be statistically significant. Data were expressed as mean \pm s.e.m.

RESULTS

Cisplatin-sensitive and -resistant human ESCC cell lines

To classify the ESCC cell lines (KYSE series) into cisplatin-sensitive and -resistant cell lines, the cell viability of nine KYSE cell lines in the presence of cisplatin was analyzed using the WST-1 assay (Figure 1). Cisplatin treatment (66.7 µM, 48 h) resulted in a decrease in cell viability of 0–80%, as compared with cells treated with the vehicle DMSO. Among the cell lines examined, KYSE990 and KYSE960 showed the highest sensitivity to cisplatin treatment (~20% cell viability), whereas KYSE450 and KYSE520 showed the lowest sensitivity to cisplatin treatment (~80–100% cell viability). We consequently designated the cell lines KYSE990 and KYSE960 as cisplatin sensitive and KYSE450 and KYSE520 cell lines as cisplatin resistant.

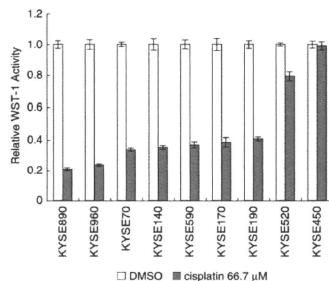

Figure 1 Designation of cisplatin-sensitive and -resistant human ESCC cell lines. The WST-1 activity of cells treated with DMSO was designated as 1 and the relative WST-1 activity is shown.

miR-141 is highly expressed in cisplatin-resistant ESCC cell lines
 We then compared the expression of miRNAs in cisplatin-sensitive and -resistant KYSE cell lines using miRNA microarray analysis. Total RNA was isolated from the KYSE cell lines and hybridized to a custom miRNA microarray platform that contained 849 miRNAs. The global miRNA expression analyses (hierarchical clustering and principal component analysis) showed that the expression profiles of the miRNAs differed between the cisplatin-sensitive and -resistant cell lines (Figure 2), and expression levels of 45 miRNAs were changed by more than fourfold in cisplatin-sensitive cell lines as compared with cisplatin-resistant cell lines (Supplementary Table 1). Subsequently, the expression levels of the 10 miRNAs that were selected according to the miRNA microarray data and literature search^{33–36} were validated by quantitative reverse transcription-PCR. This confirmed that miR-141, miR-21, miR-19b, miR-200a, miR-19a, miR-27a, miR-20a and miR-20b were expressed at significantly higher levels in the cisplatin-resistant lines, and miR-205 and miR-224 at significantly lower levels than in the cisplatin-sensitive cell lines ($P < 0.05$) (Table 1). Notably, miR-141 was upregulated the most in the cisplatin-resistant lines as in contrast with the cisplatin-sensitive lines (87-fold, $P = 0.001$) (Figure 3).

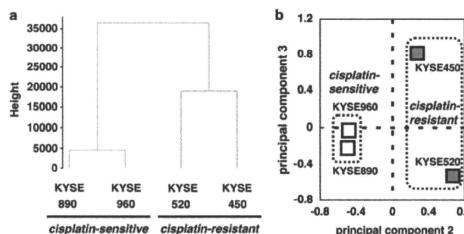

Figure 2 Global miRNA expression analysis of ESCC cell lines. Hierarchical clustering (a) and principal component analysis (b) of global miRNA expression in ESCC cell lines. These analyses reveal different miRNA expression profiles between cisplatin-sensitive and -resistant cell lines.

Table 1 List of miRNAs that were expressed differentially in cisplatin-sensitive and cisplatin-resistant cell lines

miRNAs	Expression level of miRNA (mean \pm s.e.m.)		Fold change Resistant/sensitive	P-value Resistant vs sensitive
	Cisplatin-sensitive cell lines	Cisplatin-resistant cell lines		
miR-141	189.67 \pm 24.95	16587.80 \pm 4145.71	87.45	0.0108

miR-224	1680.99 \pm 131.29	444.79 \pm 283.08	0.26	0.0054

Abbreviation: miRNA, microRNA.

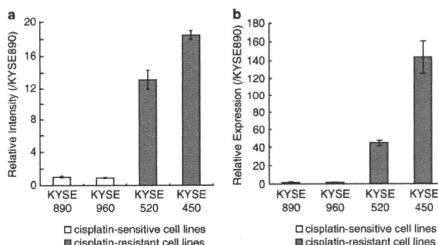

Figure 3 miR-141 is highly expressed in cisplatin-resistant KYSE cell lines. (a) miRNA microarray analysis. The data shown present the signal intensity of miR-141 relative to the signal intensity of miR-141 in KYSE890, which was set as 1. (b) Quantitative reverse transcription-PCR analysis of miR-141 was carried out to validate the microarray results. The data shown present levels of miR-141 relative to that in KYSE890, which was set as 1.

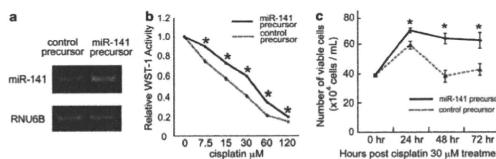

Figure 4 Ectopic expression of miR-141 induces cisplatin resistance in KYSE960 cell lines. (a) Ectopic expression of miR-141. KYSE960 cell lines, which express relatively low levels of endogenous miR-141, were transfected with the miR-141 or control precursor. Quantitative reverse transcription-PCR was used to analyze the expression of miR-141 (top) and RNU6B (bottom) in these cells. (b) Cell viability was assessed by the WST-1 assay. The WST-1 activity of cells treated with DMSO was taken as 1. (c) Trypan blue dye exclusion assay. The time at which the cells were treated with cisplatin was considered to be time 0. The number of viable cells at the respective time points is shown. * $P<0.05$, between miR-141 precursor-transfected cells and control precursor-transfected cells.

Ectopic expression of miR-141 confers cisplatin resistance in cisplatin-sensitive cell lines

To investigate whether miR-141 is involved directly in the development of cisplatin resistance, we examined the effects of miR-141 on cisplatin sensitivity. We expressed the miR-141 precursor ectopically in the cisplatin-sensitive cell lines, because they express relatively low levels of endogenous miR-141, and examines whether miR-141 expression rendered the cells resistant to cisplatin-induced cell death. Following transfection of the miR-141 precursor, the cells were collected and ectopic expression of miR-141 was confirmed by quantitative reverse transcription-PCR (Figure 4a). Cells transfected with the control precursor were used as controls. The results of the WST-1 assay showed that the KYSE960 cells that had been transfected with the miR-141 precursor exhibited a markedly reduced sensitivity to varying concentrations of cisplatin (7.5, 15, 30, 60 or 120 μ M) (Figure 4b). Similar findings were obtained with KYSE890 cells (data not shown). Moreover, the trypan blue dye exclusion assay revealed that the proportion of KYSE960 cells, which remained viable after treatment with cisplatin (30 μ M), was significantly ($P<0.05$) elevated at each time point in cells that overexpressed miR-141; 18, 68 and 48% at 24, 48 and 72 h after cisplatin treatment, respectively (Figure 4c). These results

indicated that ectopic expression of miR-141 could confer cisplatin resistance in KYSE cell lines by enhancing their growth and viability.

miR-141 represses YAPI expression post transcriptionally

In an effort to elucidate the mechanism of induction of cisplatin resistance by miR-141, we searched for potential target(s) of miR-141 using the TargetScan database (<http://www.targetscan.org/>). Among the predicted 429 candidate genes, we studied the functional role of human Yes-Associated Protein (YAPI) (NM_006106) further, because it has been reported to be a cisplatin-induced apoptosis-related gene.⁴⁰ First, we investigated the effects of transfection of the miR-141 precursor on YAPI expression in cisplatin-sensitive KYSE cell lines. The quantitative reverse transcription-PCR and western blotting analyses revealed that expression levels of YAPI messenger RNA and protein were decreased in miR-141 precursor-transfected cells as compared with control precursor-transfected cells (Figure 5a), which indicated that the expression of YAPI was inhibited by miR-141. Furthermore, a significant ($P<0.01$) decrease in relative luciferase activity was noted when the miR-141 precursor was co-transfected with the wild-type, but not with the mutant, YAPI-3'-UTR reporter (Figures 5b and c).

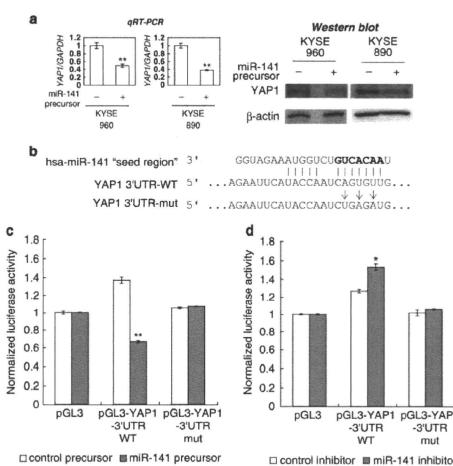

Figure 5 miR-141 negatively regulates YAP1 by binding to a complementary site in the YAP1 3'-UTR. (a) miR-141 reduces the expression levels of YAP1 messenger RNA and protein. Expression levels of YAP1 messenger RNA (left panels) and protein (right panels) were assessed 72 h after transfection of the miR-141 precursor or control precursor in cisplatin-sensitive KYSE cell lines. GAPDH for messenger RNA levels and β-actin for protein levels were used as controls. (b) Sequence alignment of human miR-141 with the 3'-UTR of YAP1. The seed sequence of miR-141 (top) was complementary to a sequence in the 3'-UTR of YAP1 (middle). Bottom, three point mutations were introduced into the 3'-UTR of YAP1 to create the mutant luciferase reporter construct. (c) miR-141 inhibits the wild-type YAP1-3'UTR reporter but not the mutated version. (d) The activity of the wild-type reporter but not the mutated version is upregulated by knockdown of miR-141. For each sample, firefly luciferase activity was normalized to *Renilla* luciferase activity. **P<0.01, *P<0.05, between miR-141 precursor-transfected cells and control precursor-transfected cells.

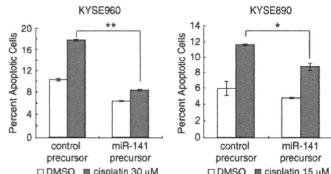

Figure 6 Ectopic expression of miR-141 renders cisplatin-sensitive cell lines resistant to cisplatin-induced apoptosis. KYSE960 and KYSE890 cell lines were transfected with the miR-141 or control precursor. After 24 h, cisplatin was added in fresh medium and the cells were incubated for a further 48 h. The cells were then labeled with FITC-Anexin V and propidium iodide, and apoptosis was analyzed by flow cytometry. The percentage of apoptotic cells is shown. **P<0.01, *P<0.05, between miR-141 precursor-transfected cells and control precursor-transfected cells.

In contrast, when the wild-type reporter was co-transfected with the miR-141 inhibitor, the relative luciferase activity of the reporter was significantly ($P<0.05$) enhanced (Figure 5d). These results show that miR-141 interacts directly with the predicted target sequence in YAP1.

miR-141 exerts an anti-apoptotic effect that confers cisplatin resistance in ESCC cell lines

Given that one of the target genes of miR-141 is YAP1, which is a transcriptional factor that promotes the expression of proapoptotic genes during apoptosis induced by DNA-damaging agents, we explored the regulatory mechanism by which miR-141 inhibits cisplatin-mediated apoptosis further. The Annexin V/propidium iodide assay showed that apoptosis of the cisplatin-sensitive ESCC cell lines (KYSE960 and KYSE890) in response to cisplatin was enhanced markedly compared with that of the cisplatin-resistant cells (data not shown). In both KYSE960 and KYSE890 cells, transfection of the miR-141 precursor, but not the control precursor, significantly decreased the percentage of cisplatin-induced apoptotic cells (Figure 6). Taken collectively, these results show that the anti-apoptotic effect of miR-141, perhaps through inhibition of YAP1,

might explain how miR-141 confers cisplatin resistance in ESCC cell lines.

DISCUSSION

In the present study, we explored the possible role of miRNAs in cisplatin resistance in ESCC. By comparing the expression of miRNAs in cisplatin-sensitive and -resistant KYSE series, we found 10 miRNAs that were expressed differentially between these lines. Among them were some miRNAs, such as miR-21, miR-205, miR-224, miR-27a, miR-200a and miR-141, which are known to be associated with cancer. miR-21 has been reported to be ubiquitously overexpressed in diverse tumors, including both esophageal adenocarcinoma and ESCC,²³ and it regulates proliferation and invasion in ESCC.²⁴ In addition, inhibition of miR-21 has been shown to increase the sensitivity of NC160 and cholangiocarcinoma cell lines to chemotherapeutic agents.^{17,25} miR-20b is highly overexpressed in ESCC and gastric cancer,^{26,27} and its high expression level is associated with a lower probability of survival.²⁸ The expression of miR-205 is highly specific for squamous epithelium,²⁹ and it has been shown to be downregulated in both esophageal adenocarcinoma and ESCC.³⁰ miR-205 has also been found to function as an oncosuppressor in breast cancer and to improve responsiveness to tyrosine kinase inhibitor therapies.³¹ Furthermore, miR-224, miR-27a and miR-200a have also been associated with hepatocellular carcinoma, ESCC and ovarian cancer, respectively.^{32–34} miR-141 is associated with various types of cancer.^{35–39} Given that miR-141 was found to be either upregulated (ovarian and colorectal cancers)^{37,38} or downregulated (prostate, hepatocellular and renal cell carcinoma)^{37–39} in various cancers, it appears that miR-141 might have different roles, as either an oncogene or as a tumor-suppressor gene, in different cancer types of cancer. Therefore, most of the differentially expressed miRNAs identified in this study by comparing miRNA expression in cisplatin-sensitive and -resistant human ESCC cell lines appear to show some involvement in cancer; however, none of these miRNAs has previously been found to be associated with the development of cisplatin resistance.

Our study further showed that miR-141, which was the most upregulated miRNA in cisplatin-resistant ESCC cell lines, conferred cisplatin resistance in ESCC. Upon ectopic expression of miR-141, the viability of the cisplatin-sensitive cell lines after cisplatin treatment was elevated significantly. This effect was due to the inhibition of cisplatin-induced apoptosis by miR-141, which indicated that miR-141 is an anti-apoptotic factor. Furthermore, we found that miR-141 negatively regulates the expression of YAP1. YAP1 is a well-documented pro-apoptotic transcriptional factor, and inhibition of its expression greatly reduces cisplatin-induced apoptosis.^{40,41} Given that the results of our present study showed that miR-141 targets YAP1 and negatively regulates the expression of YAP1, it is likely that miR-141 exerts its anti-apoptotic effect, at least in part, through repressing YAP1 expression.

In summary, our study provides the first evidence that miR-141 has a key role in cisplatin resistance in ESCC, because of its anti-apoptotic properties. Our study highlights the potentially important role of miRNAs in the development of drug resistance, and suggests that miRNAs might serve as biomarkers for response to chemotherapy.
