

<http://www.cdc.gov/tularemia/resources/whotularemiamanual.pdf>) are appropriate for Japanese tularemia patients. Some β -lactams might also be effective for some patients in Japan. These findings provide important information related to recommendations for post-exposure prophylaxis and therapy for tularemia patients in Japan.

Acknowledgements

This study was supported by a Health Science Research Grants from the Ministry of Health, Labour and Welfare of Japan (H22-Shinkou-Ippan-010 and H23-Shinkou-Wakate-022). N.S. was supported by a Honjo International Scholarship Foundation.
