Differentiated reduction of mortality

Cerebrovascular Disease Control

- 3 years program from 1969 to aim the reduction of death caused by cerebrovascular disease by half
- 131 pilot districts were chosen from the municipalities where the mortality caused by cerebrovascular diseases are more than double than the national average
- Screening (hypertension) of all residents aged 40 to 64 in the pilot district, followed by a detailed medical checkup for risky group
- Reference to the hospital and health education regarding lifestyle
- Home visit by public health nurse
- Scaled up to the national level from 1973

Sustainable Development Goals (SDGs) The 2030 Agenda

3.4 By 2030, reduce by one third premature mortality from non-communicable diseases through prevention and treatment and promote mental health and well-being

Indicator

3.4.1 Mortality of cardiovascular disease, cancer, diabetes or chronic respiratory disease
