Measure Type	Primary	
Measure Title	Change From Baseline to Month 18 in the Total Functional Capacity (TFC) Scale [LOCF Imputation Method]	
Measure Description	Establish preliminary estimate of minocycline's impact on progression of HD (measured by the change in Total Functional Capacity (TFC) score of Unified Huntington's Disease Rating Scale [UHDRS] between baseline & Month 18), and to assess futility of further study of minocycline. TFC consists of five ordinally scaled items assessing a person's capacity with: 1. occupation 2. financial affairs 3. domestic responsibilities 4. activities of daily living and 5. independent living. Total score ranges from zero (worst) to 13 (best).	
Time Frame	Baseline to 18 months	
Safety Issue	No	
Measured Values	Change From Baseline to Month 18 in the Total Functional Capacity (TFC) Scale [LOCF Imputation Method] [units: units on a scale]
