

Fig. 2 A heatmap of renal mRNAs which were significantly altered in male adult mice (8 weeks) by SelenBP1 deletion. Genes the expression of which was significantly increased and decreased by SelenBP1 deletion are shown by red and green, respectively. For the magnitude of the alteration, see color gradation shown beneath the figure. Each lane is the mRNA prepared from male mice at 8 weeks. 18 genes indicated by arrows and numbers correspond to Table 2.
