- \* Vision Statement of Choosing Wisely East Asia (Draft Version)
- 1. To implement high value care based on medical professionalism.
- 2. To engage patient and public to enhance health literacy.
- 3. To promote Shared Decision Making and encourage patient to express their values.
- 4. To embrace the cultural and social context.
- 5. To develop sustainable and equitable health care system

**Future Direction:** Along with the dissemination of U.S. and Canadian "Top Five Lists" and encouraging Japanese professional societies to articulate their own "List of Five", reminding clinicians of new medical professionalism appears to have more profound moral influences on their mindset and clinical behavior especially in shared decision making with patients and family.
